

Jim Jensen

Bachelor of Arts, Grinnell College, 1981. Jim Jensen has over 20 years experience in organic waste management, including anaerobic and aerobic technologies. As a Thomas Watson Foundation fellow, Mr. Jensen did post-graduate research about anaerobic digestion technologies in Europe and Asia. Later, he worked as a research assistant at the Institute of Gas Technology, Chicago. As a partner with Sound Resource Management, Seattle, he consulted for a wide range of public and private organizations. He developed and implemented programs in waste prevention, reuse and recycling. He is well regarded for his expertise in large-scale composting and vermicomposting, including collecting and managing greenwaste, food waste, manure and other organic wastes. At ECC, he has contributed to the establishment of business programs and systems to build a large pool of annually recurring carbon credits for global financial markets. He currently manages the implementation of a comprehensive program to generate carbon credits from agricultural methane projects in the U.S. and Canada.
