

Dr. J David Latshaw is a faculty member in the Department of Animal Sciences at The Ohio State University. He teaches the introductory nutrition course in animal sciences and the poultry management course. His nutrition research has used egg type chickens and meat type chickens. Areas of hen research have included selenium requirement and the utilization of selenium sources, amino acid requirements when expressed on a daily basis, and retention or excretion of dietary nitrogen. Areas of broiler research have included amino acid requirements, utilization of nutrients that affect leg problems, the division of energy between maintenance and production, and factors that affect energy consumption by broilers.
